The present sequence is a serine protease designated BSSP-3, which is isolated from mouse brain tissue. Transformants may be used to produce the enzyme or its partial sequences. Products from the present invention are used for screening for potential peptide or non-peptide

They may be administered to patients at high risk of symptomatic or endotoxic shock. The fragments may also be fixed to inert supports for purifice, purposes. The fragments may be modified to have greater binding affinity for the endotoxin-related substance than the native scavanger receptor protein, or to more effectively neutralise the toxic or pathogenic effects of mols, that bind
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Treatment and diagnosis of endotoxaemia and related disease states - using a polypeptide fragment of the extracellular portion of a macrophage scavenger receptor protein pisclosure; Page 38; 56pp; English.
New receptor protein - has affinity for acetylated low density lipoprotein corresponding antibodies and DNA sequences.

Claim 2: Page 5-7; 10pp; Japanese.
The sequences given in R40802-03 represent the human scavenger
receptors I and II. These proteins may be used in the production
of antihuman scavenger receptor antibodies (AHSRA). These peptides
were used to immunise a mammal, pref. a rabbit, and anti-serum was
prepared. A monoclonal antibody was prepared from HAT-resistant
hybridoma. These antibodies may be used to determine the progress
of arteriosclerosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The human scavenger receptor protein sequence was deduced from the DNA sequence obtd. by screening a platelet cDNA library with degenerate probes designed based on fragments of the purified scavanger receptor protein. The scavanger receptor protein has a binding capacity for acetylated low density lipoprotein (LDL) and binds endotoxin. Fragments of the extracellular portion of the scavanger receptor protein inactivate endotoxin-related substances and are used in the diagnosis and treatment of endotoxaemia. They may be administered to patients at high risk of symptomatic or endotoxic shock. The fragments may also be fixed to inert supports for purifice, purposes. The fragments may be modified to have
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            03-SEP-1992.

The transfected cells show an enhanced ability to attach to a solid support and are useful for screening cpds. for biological activity, or for identifying antagonists of the scavenger receptor gene, e.g. to develop agents for treatment of atherosclerosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The gene encoding the receptor can be expressed from a cytomegalovirus promoter in a host cell e.g. CHO cell. The resulting recombinant scavenger receptor can be used to detect modified lipoproteins or modified substances in the blood.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New scavenger receptor producing animal cells - which have been transformed with vector control gene for coding human scavenger receptor I or II type under control of promoter, etc. Disclosure; Fig 1; 9pp; Japanese.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            J03290184-A.

In addition to treating Gram-positive septic shock, the MSRP can be used to screen for other compounds for treating Gram-positive septic shock MSRP can also be used to purify, label or detect LTA or LTA-containing cells. MSRP, active MSRP fragments, anti-MSRP antibodies or other compounds that inhibit binding of Gram-positive bacteria to MSRP can be used to treat pathologies such as septicaemia, Gram-positive bacterial infection, Gram-positive septicaemia or Gram-positive or Gram-negative septic shock.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Disclosure; Column 23-26; 16pp; English.

This sequence represents the human macrophage scavenger receptor protein (MSRP). MSRP binds specifically to the lipoteichoic acid (LTA) residues on the Gram-positive bacterial cell wall. MSRP exhibit unusually broad binding specificity for polyanionic ligands, and have been implicated in atherosclerosis and a variety of host defence functions. This protein can be used in the method of the invention. The method of the invention is for the treatment of septicaemia caused by Gram-positive bacteria. The method comprises administration of a MSRP in an amount sufficient to
Recombinant DNA - encoding tumour associated antigen, immunoregulin-95
Disclosure; Fig 1; 69pp; English.
Immunoregulin-95 is a 90K tumour-associated antigen purified from the culture fluid of the human breast cancer cell line, CG-5, the serum of a breast cancer patient, or the ascitic fluid from an ovarian cancer patient. The native antigen, which has a mol. wt. c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence of an immunoregulin (IR)-95 polypeptide Tumour associated antigen; breast cancer; cell 1: ovarian cancer; immunoregulin-95; IR-95.

                                                                                                                                                                               New 90K tumour-associated antigen, IR-95 - is for use in diagnosis and therapy of cancer, HIV and auto-immune diseases Claim 2; pages 45-48; 68pp; English.

90K antigen has an apparent molecular weight of approx. 95 kd. It is 290K antigen has an apparent molecular weight of approx. 95 kd. It is 4 tumour associated antigen and is elevated in the serum of patients with cancer and also in patients with HIV. It reacts with MAb Sp-2 which was prod. by immunising mice with proteins that had been released into tissue culture fluid by human MCF-7 breast cancer cells. MAb Sp-2 cell line is deposited at the Institut Pasteur, Paris, Accession number 1-1083. 90K is also present in normal subjects. It is purified from the culture fluid of the human breast cancer cell line, CG-5. N-terminal sequencing of the 90K antigen was used to design a 'quessmer' nucleotide sequence (Q48171) as a probe to screen a lambda-gtl0 library prepd. from MCF7 polyA+ RNA.

The complete nucleotide sequence of isolated clones is given in

                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                       This is the amino acid sequence of human cytokine regulatory factor (CYTRF), also known as cyclophilin C-associated protein (CyCAP).

Methods are provided for the modulation of cytokine production by T helper cells using CYTRF (especially human CYTRF). A pharmaceutical composition comprising CYTRF as an active agent is administered in vitro or in vivo, and can act on mature, committed Thi type T cells to decrease the production of pro-inflammatory cytokines, or to skew the commitment of precursor T helper cells to Thi or a Thi cytokine profile. The administration of CYTRF is useful in the diagnosis and treatment of autolimnume diseases (e.g. multiple sclerosis, rheumatoid arthritis, and degenerative joint diseases including ankylosing spondylitis and reactive arthritis), and inflammation caused by bacterial, viral or parasitic infection (e.g. meningitis, hereby a companion of the commitment of autolimnum companion of cytral meningencephalitis, and reactive arthritis), and hepatitis),
                                                                                                                                                                                 Matches
                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                  including response to vaccination (e.g. vaccines containing rabic varicella zoster, and measles) and skin sensitivity (e.g. graft rejection and graft vs host disease). CYTRF signalling and relationation and graft vs host disease). CYTRF signalling and relationations are also useful for modelling and screening new pharmacological agents. The administration of agents that block CYTRF action (e.g antibodies) are useful in reducing unwanted allergic responses, especially in asthma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Reduction of pro-inflammatory cytokines in a T cell population - using cytokine regulatory factor (CYTRF), useful in the diagnosis and treatment of pro-inflammatory conditions

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC laim 1; Page 20-24; Spp; English.

CC The present sequence represents human neurotrypsin. Neurotrypsin proteins

CC and polynucleotides can be used: (i) to inhibit tumours, including

CC metastases, e.g. of brain or retina; (ii) to minimise tissue damage

caused by stroke or brain injury (having a protective effect on the

penumbra zone); (iii) to treat or prevent neurodegeneration,

neuroinflammatory disease (e.g. multiple sclerosis) or epilepsy; (iv) to

increase survival of damaged neurons (e.g. in cases of hypoxia,

CC ischaemia, nerve transection) and to stimulate regeneration and/or

CC causes of cell death) in the nervous system; (vii) to regenerate brain

CC degeneration or neoangiogenesis); (vi) to prevent apoptosis (or other

CC and/or nervous tissue; (viii) to treat pain; (ix) to improve brain

CC wide range of psychiatric disorders; and (xi) to treat or prevent a

CC injury associated with protease expression (specifically emphysema or

CC bronchitis).

             The present sequence represents mouse neurotrypsin. Neurotrypsin proteins and polynucleotides can be used: (i) to inhibit tumours, including metastases, e.g. of brain or retina; (ii) to minimise tissue damage caused by stroke or brain injury (having a protective effect on the

                                                                            This sequence represents a mouse Macro scavenger receptor (MMacrosR) which is used to confirm the presence of a novel human macro scavenger receptor (HMacrosR) This polypeptide and resulting antibodies can be used to treat cardiovascular diseases, including atherosclerosis, hypertension myocardial and cerebral infarction, angina, organ failure, stroke, gangrene, and loss of function in the extremities. They can also be used to treat or diagnose various macrophage and other immune cell related host defense disorders, septic shock, pancreatitis, multiple organ failure, endotoxaemia and infections caused by gram negative and gram positive bacteria. Agonists and antagonists may also be used to treat these diseases. The polynucleotide can be used to detect mutated forms of the polynucleotide can be used to detect mutated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   16-JUL-1998; E

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            receptor, cysteine-rich) domain. The gene and encoded protein can be used to diagnose or treat tumours, particularly of the nervous system (medullo-blastoma or glioma) or breast. The DNA sequence and probes derived from it, are used to identify genes that express SRCR-domain containing proteins, to determine the form in which these proteins exist and to assess the significance of individual forms on cellular properties. The protein can be used to detect the presence of autoantibodies and antibodies which regulate its expression.

                                             and related DNA, anuscopial immune defence and phagocytosis
Claim 10; Fig 2A-B; 62pp; English.
A novel macrophage receptor with a collagenous domain, named MARCO (W03561), is a membrane-bound trimeric protein which is expressed strongly after birth in a subset of macrophages in mouse spleen and lymph nodes. It binds to bacteria but not to yeast, and probably plays a role in immune defence and/or phagocytosis. The amino acid sequence of MARCO was deduced from DNA (see also T39340) obtd. from sequence of MARCO was deduced from DNA (see also T39340) obtd. from the produced sequence of MARCO can be produced sequence of MARCO can be produced.
a mouse macrophage cDNA library.
in transformed host cells. It is
in detecting MARCO or interfering

The sequences given in R40802-03 represent the human scavenger receptors I and II. These proteins may be used in the production of antihuman scavenger receptor antibodies (AHSRA). These peptides were used to immunise a mammal, pref. a rabbit, and anti-serum was prepared. A monoclonal antibody was prepared from HAT-resistant hybridoma. These antibodies may be used to determine the progress
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 R40802;

22-FEB-1991; US-6622:
This sequence represents the human macrophage scavenger receptor protein (MSRP). MSRP binds specifically to the lipoteichoic acid (LTA) residues on the Gram-positive bacterial cell wall. MSRP exhibit unusually broad binding specificity for polyanionic ligands, and have been implicated in atherosclerosis and a variety of host defence functions. This protein car be used in the method of the invention. The method of the invention is for the treatment of septicaemia caused by Gram-positive bacteria. The method comprises administration of a MSRP in an amount sufficient to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DNA sequence obtd. by screening a platelet cDNA library with degenerate probes designed based on fragments of the purified scavanger receptor protein. The scavanger receptor protein has a binding capacity for acetylated low density lipoprotein (LDL) and binds endotoxin. Fragments of the extracellular portion of the scavanger receptor protein inactivate endotoxin-related substances and are used in the diagnosis and treatment of endotoxaemia. They may be administered to patients at high risk of symptomatic or endotoxic shock. The fragments may also be fixed to inert supports
                                                                                                                                                                                                                                                   administration of macrophage scavenger r

Human type I (W08077) and type II (W08078) macrophage scavenger receptors can be expressed in human embryonic kidney 293 cells following transfection of the cells with vectors carrying the respective scavenger receptor genes (T43259 and T43260). The transfected cells show an enhanced ability to attach to a solid support and are useful for screening cods. for biological activity, or for identifying antagonists of the scavenger receptor gene, e.g. sequence 451 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         inhibit complement activation, cytokine release or nitric oxide production induced by LTA released by the Gram-positive bacteria. In addition to treating Gram-positive septic shock, the MSRP can be used to screen for other compounds for treating Gram-positive septic shock. MSRP can also be used to purify, label or detect LTA or LTA-containing cells. MSRP, active MSRP fragments, anti-MSRP antibodies or other compounds that inhibit binding of Gram-positive bacteria to MSRP can be used to treat pathologies such as septicaemia, Gram-positive bacterial infection,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Type I macrophage scavenger receptor.
Type I macrophage scavenger receptor; SRG; kidney; cell substrate; cell attachment; atherosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (SMIK) SMITHKLINE BEECHAM

                                                              This sequence represents a fragment of a human protein which contains a SRCR (scavenger receptor, cysteine-rich) domain. The gene and encoded protein can be used to diagnose or treat tumours, particularly of the nervous system (medullo-blastoma or glioma) or breast. The DNA sequence and probes derived from it, are used to identify genes that express SRCR-domain containing proteins, to determine the form in which these proteins exist and to assess the significance of individual forms on cellular properties. The protein can be used to detect the presence of autoantibodies, and Ab which regulate its expression. Sequence 666 AA;
                                                                                                                                                                                                                 Proteins containing scavenger receptor, cysteine rich domain useful for diagnosis and treatment of tumours Claim 1; Fig 1; 54pp; German.

The gene encoding the receptor can be expressed from a cytomegalovirus promoter in a host cell e.g. CHO cell. The resulting recombinant scavenger receptor can be used to detect modified liporoteins or modified substances in the blood.

This is the amino acid sequence of a novel protein (see W68200), considered from a cysteine-rich (SRCR) family. The sequence was deduced from an isolated cDNA clone (see V54605). Sp alpha transcripts are found in human bone marrow, spleen, lymph node, thymus and foetal liver but not in non-lymphoid tissues. Sp alpha has the same domain organisation as the extracellular region of CD5 and CD6 and is composed of 3 SRCR domains. It is capable of binding to cells of the monocyte activation, function and/or survival, and is therefore an important component in the immunoregulatory system. Wethods of using antibodies reactive with Sp alpha are disclosed. In addition, antibodies that bind to Sp alpha for modulating the interaction between Spalpha and its receptor. Sp alpha can be used in pharmaceutical compositions to regulate the immune response in, for example, autoimmune disease, viral infections, transplant

of.

CC The cDNA sequences are obtained from cDNA libraries, prepared from CC fetal lung, fetal kidney, fetal brain, fetal liver and fetal retina. CC The encoded polypeptides have specific uses based on their homology to CC known polypeptides, e.g. PRO211 and PRO217 can be used for disorders CC associated with the preservation and maintenance of gastrointestinal mucosa and the repair of acute and chronic mucosal lesions (e.g. enterocolitis, Zollinger-Ellison syndrome, gastrointestinal CC ulceration and congenital microvillus atrophy), skin diseases associated with abnormal keratincyte differentiation (e.g. psoriasis, epithelial CC cancers such as lung squamous cell carcinoma of the vulva and gliomas), potent effects on cell growth and development, diseases related to growth or survival of nerve cells including Parkinson's disease, Alzheimer's cuisease, ALS, neuropathies or cancer. PRO265 can be used as for survival of the reducing dermal scarring. PRO264 can be used as a target for anti-tumor drugs. PRO533 may be used in the treatment of Usher Syndrome or Atrophia areata; PRO269 can be used as an anti-thrombotic agent; PRO287 polypeptides and portions may have therapeutic applications in wound healing and tissue repair; PRO317 can be used for treating problems of the kidney, uterus, endometrium, blood vessels, or related tissue, e.g. in the heart of genital tract.

protein - protein database search, using Smith-Waterman algorithm Mon Mar 13 10:31:53 2000;

Run on: MasPar time 6.67 Seconds 355.116 Million cell updates/sec

Tabular output not generated.

Title: >US-09-147-947-6

Description: Perfect Score: (334-433) from US09147947A.pep (5 of 6) 787

Sequence: 1 IRLAGGKGSHEGRLEVYYRG.....RRQWGRHDCSHREDVSIACY 100

Scoring table: Gap 11 PAM 150

Searched: 188963 seqs, 23686106 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: a-geneseq35

1:geneseqp

Statistics: Mean 28.512; Variance 102.112; scale 0.279

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Transformants may be used to produce the enzyme or its partial sequences. Products from the present invention are used for screening for potential peptide or non-peptide serine protease inhibitors or expression regulators for use as drugs. Sequence 822 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 W99087 standard; Protein; W99087; 13-MAY-1999 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         04-FEB-1999.

                  gene therapy and in drug development Claim 1; Page 29-2; SOpp; English.
The present sequence represents mouse neurotrypsin. Neurotrypsin proteins and polynucleotides can be used: (i) to inhibit tumours, including metastases, e.g. of brain or retha; (ii) to minimise tissue damage caused by stroke or brain injury (having a protective effect on the penumbra zone); (iii) to treat or prevent neurodegeneration,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                Mouse neurotrypsin.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is a serine protease designated BSSP-3, which is isolated from mouse brain tissue. Transformants may be used to produce the enzyme or its partial sequences. Products from the present invention are used for screening for potential peptide or non-peptide serine protease inhibitors or expression regulators for use as drugs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Mus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       bronchitis).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    production induced by LTA released by the Gram-positive bacteria. In addition to treating Gram-positive septic shock, the MSRP can be used to screen for other compounds for treating Gram-positive septic shock. MSRP can also be used to purify, label or detect LTA or LTA-containing cells. MSRP, active MSRP fragments, anti-MSRP antibodies or other compounds that inhibit binding of Gram-positive bacteria to MSRP can be used to treat pathologies such as septicaemia, Gram-positive bacterial infection,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence represents the human macrophage scavenger receptor protein (MSRP). MSRP binds specifically to the lipoteichoic acid (LTA) residues on the Gram-positive bacterial cell wall. MSRP exhibit unusually broad binding specificity for polyanionic ligands, and have been implicated in atherosclerosis and a variety of host defence functions. This protein can be used in the method of the invention. The method of the invention is for the treatment of septicaemia caused by Gram-positive bacteria. The method comprises administration of a MSRP in an amount sufficient to inhibit complement activation, cytokine release or nitric oxide

                                                                              hybridoma. Theorem of arteriosclerosis.
                                                                                                                          Anti:human scavenger receptor antibody - useful for monitoring progress of arteriosclerosis Claim 2; Page 5-7; 10pp; Japanese.

The sequences given in R40802-03 represent the human scavenger receptors I and II. These proteins may be used in the production of antihuman scavenger receptor antibodies (AHSRA). These peptides were used to immunise a mammal, pref. a rabbit, and anti-serum was prepared. A monoclonal antibody was prepared from HAT-resistant, hybridoma. These antibodies may be used to determine the progress

They may be administered to patients at high risk of symptomatic or endotoxic shock. The fragments may also be fixed to inert supports for purificin purposes. The fragments may be modified to have greater binding affinity for the endotoxin-related substance than the native scavanger receptor protein, or to more effectively neutralise the toxic or pathogenic effects of mols. that bind the scavanger receptor protein or of organisms which express such mols. See also R27036.

                                                                                          New scavenger receptor-producing animal cells - which have been transformed with vector contg. gene for coding human scavenger receptor I or II type under control of promoter, etc. Disclosure; Fig 1; 9pp; Japanese.

The gene encoding the receptor can be expressed from a cytomegalorius promoter in a host cell e.g. CHO cell. The resulting recombinant scavenger receptor can be used to detect modified lipoproteins or modified substances in the blood.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Disclosure: Page 10-13; 32pp; English.
Human type I (W08077) and type II (W08078) macrophage scavenger receptors can be expressed in human embryonic kidney 293 cells following transfection of the cells with vectors carrying the respective scavenger receptor genes (T43259 and T43260). The transfected cells show an enhanced ability to attach to a solid support and are useful for screening cpds, for biological activity, or for identifying antagonists of the scavenger receptor gene, e.g. to develop agents for treatment of atherosclerosis.

Disclosure; Page 38; 56pp; English.

The bovine scavanger receptor protein sequence was deduced from the

DNA sequence obtd. by screening a bovine lung cDNA library with

degenerate probes designed based on fragments of the purified

scavanger receptor protein. The scavanger receptor protein has a

binding capacity for acetylated low density lipoprotein (LDL) and

binds endotoxin. Fragments of the extracellular portion of the

scavanger receptor protein inactivate endotoxin-related substances

and are used in the diagnosis and treatment of endotoxaemia. They

may be administered to patients at high risk of symptomatic or

endotoxic shock. The fragments may be modified to have

for purificn. purposes. The fragments may be modified to have

the next the first protein the endotoxin-related substance than

New 90K tumour-associated antigen, IR-95 - is for use in diagnosis and therapy of cancer, HIV and auto-immune diseases Claim 2; pages 45-48; 88pp; English.

90K antigen has an apparent molecular weight of approx. 95 kd. It is a tumour associated antigen and is elevated in the serum of patients with HIV. It reacts with MAb SP-2 which was prod. by immunising mice with proteins that had been released into tissue culture fluid by human MCF-7 breast cancer cells. MAb SP-2 cell line is deposited at the Institut Pasteur, Paris, Accession number 1-1083. 90K is also present in normal subjects. It is purified from the culture fluid of the human breast cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     W09316181-A.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         95 kD, is present as a high mol. wt. complex. Homology in of AAs 35-80 of the 90% antigen is found with type I macroj scavenger receptor; sea urchin speract receptor; and human lymphocyte glycoprotein Tl/Leu-1.
                                                                                                                                                                                                                cancer cell line, CG-5. N-terminal sequencing of the 90K antigen was used to design a 'guessmer' nucleotide sequence (Q48171) as a probe to screen a lambda-gtl0 library prepd. from MCF7 polyA+ RNA. The complete nucleotide sequence of isolated clones is given in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence of a 90K tumour-associated antigen, IR-95, capable of binding to SP-2 (Accession No. I-1083).

PS Claim 1: Page 41: 57pp; English.

CC SK-BR-3 gp97 recovered in partially proteolysed form was denatured CC and reduced and the 97 and 70 kD mols. were purified using size C creation HPDC in 0.1 percent SDS. The 97 and 70 kD mols were CC digested with Lys-C protease and the resulting peptides purified and CC sequenced. The N-terminal sequence of gp97 was used to design CC degenerate primers for use in a PCR reaction on SK-BR-3 mRNA. PCR CC reactions using primer 2 in combination with primers 1 and 3 gave prods. CC of 97 and 121 bp. Further PCR using primers 2, 3 and 4 yielded DNA CC sequences of 740 and 765 respectively. A DNA sequence was obtd. from CC the PCR prods. Two additional oligonucleotide sequences were CC synthesised based on this sequence and used to probe a THP-1 cDNA CC ibrary to obtain the full-length cDNA sequence that encodes SK-BR-3 gp97. Both strands of clone 218 were sequenced. It encodes a novel CC of lymphocytes. It can be used for treating or preventing diseases that cresult from binds the Mac-2 lectin and interferes with PHA activation CC target cell. The gp. can be used in treatment of cancers, partic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        profile. The administration of CYTRF is useful in the diagnosis and treatment of autoimmune diseases (e.g. multiple sclerosis, rheumatoid arthritis, and degenerative joint diseases including ankylosing spondylitis and reactive arthritis), and inflammation caused by bacterial, viral or parasitic infection (e.g. meningitis, herpes encephalitis, viral meningoencephalitis and viral hepatitis), and the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of the profile of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 pharmacological agents. The administration of agents that block CYTRF action (e.g antibodies) are useful in reducing unwanted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (CYTRF), also known as cyclophilin C-associated protein (CyCAP). Methods are provided for the modulation of cytokine production by T helper cells using CYTRF (especially human CYTRF). A pharmaceutical composition comprising CYTRF as an active agent is administered in vitro or in vivo, and can act on mature, committed Thi type T cells to decrease the production of pro-inflammatory cytokines, or to skew the commitment of precursor T helper cells to Thi or a Thi cytokine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Reduction of pro-inflammatory cytokines in a T cell population - using cytokine regulatory factor (CYTRF), useful in the diagnosis and treatment of pro-inflammatory conditions

protein - protein database search, using Smith-Waterman algorithm

Tabular output not generated. Run on: Mon Mar 13 10:31:24 2000; MasPar time 10.32 Seconds 457.141 Million cell updates/sec

Description: Perfect Score: Title: >US-09-147-947-6 (334-433) from US09147947A.pep (5 of 6)

Sequence: 1 IRLAGGKGSHEGRLEVYYRG.....RRQWGRHDCSHREDVSIACY 100

Scoring table: PAM 150 Gap 11

Searched: 142080 segs, 47172406 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database:

Statistics: pir62 1:pir1 2:pir2 3:pir3 4:pir4 Mean 37.820; Variance 61.366; scale 0.616

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
